

## Ensuring Sustainability

*The Natural Resource For Your Landscape Investment*

### Recyclable Site Solutions

Recycling green waste completes the cycle of development and maintenance. We turn plant debris into tested and certified, environmentally clean material to save money and benefit landscapes by:

- **Erosion control**  
Recycled mulch lessens the impact of rain on slopes and increases the soil's capacity to hold water.
- **Weed suppression**  
Mulch blocks light on soil, making it tough for weeds to germinate. If they do root on the mulch, removal is easy.
- **Plant protection**  
Mulch protects delicate roots and reduces soil compaction.
- **Water conservation**  
Mulch used as ground cover reduces water evaporation, also reducing irrigation.
- **Landscape topdressing**  
Mulch works as a decorative topdressing on bare soil between plantings to reduce erosion, suppress weeds, conserve water and limit runoff.

## Recycling Expertise

Our process reduces landfill space, improves soil quality, limits the need for fertilizers and chemicals, and encourages landscapes to grow naturally and healthfully. We offer:

- California Integrated Waste Management Board (CIWMB) approved Recycling Facility
- Recycling green waste into mulch
- Mulch Certificate of Analysis ensuring purity of product
- Mulch blower truck for fast, efficient mulch installation
- Landscape topdressing
- Mulch installation service

## Environmental Resources Portfolio

- Corporate and commercial
- Master-planned communities
- Resorts and hospitality
- Municipal and institutional
- Senior and assisted-living communities
- Mixed-use and retail
- Multifamily
- Lifestyle and neighborhood centers
- Low and high-density residential
- Estates
- Sports facilities
- Streetscapes
